

Connecting Seniors to Care and More

Improving Social Determinants of Health Through Innovation

Connecting Seniors to Care and More lays the foundation for establishing improvements in seniors' social determinants of health through technology to find ways to address:

- Meal selection and nutritious food options
- Senior isolation and frailty
- Connectivity with social services and caregivers/family members
- Expensive hospital re-admissions or emergency center visits in the geriatric population, with an emphasis on low income, homebound seniors
- Access to spiritual services, entertainment, and so much more

IMovation is the innovation think-tank for Meals on Wheels for Greater Houston and Galveston County, offering supportive client technology to Meals on Wheels programs across the nation. Together with OnGuardian we have developed an Alexa based solution to help seniors connect with a broader range of services that goes beyond our traditional meal delivery with a centralized management system that allows for distribution of curated content, messaging, communications, and care coordination. We are the bridge between our seniors and the community.

Meals on Wheels for Greater Houston and Galveston County is one of only seven organizations nationwide selected for an Innovation in Nutrition Grant from the Administration for Community Living. Meals on Wheels for Greater Houston and Galveston County delivers more than two million meals each year to 5,000 homebound seniors and people with disabilities across five counties
